

Dear Sir or Madam,

I have been using your products for years and I have enjoyed using them. However, I am concerned about the packaging. Plastic packaging is so wasteful and in most countries, a very small percent of plastic is recycled, at best it is burned in our incinerators and called “thermal recycling”. Using plastic packaging and labeling it recyclable, does not mean it can actually be recycled since most countries do not have the capabilities to recycle it. I also enclose this recent study, finding alarming results about the health concerns and plastic [here](#) and [here](#).

I would like to ask you what measures have you taken for more sustainable and environmentally friendly production, guarantying work safety/ fair wages and the safety of your products for the consumer.

Best regards,
